

RADTRAD Change Log: Version 5.0.2

Released February 2021

- A bug was discovered that causes RADTRAD to fail when run with SNAP version 3.1.2 if the “Adaptive” or “Default with Error Calculation” options are selected for the “Time Step Algorithm” parameter. This bug is resolved in Version 5.0.2. Note that versions of RADTRAD older than 5.0.2 may fail if run with newer versions of SNAP (3.1.2 and later) if these time stepping options are enabled.
