Abstract

The GENII computer code was developed for the Environmental Protection Agency (EPA) at Pacific Northwest National Laboratory (PNNL) to incorporate the internal dosimetry models recommended by the International Commission on Radiological Protection (ICRP) and the radiological risk estimating procedures of Federal Guidance Report 13 into updated versions of existing environmental pathway analysis models. The resulting environmental dosimetry computer codes are compiled in the GENII Environmental Dosimetry System. The GENII system was developed to provide a state-of-the-art, technically peer-reviewed, documented set of programs for calculating radiation dose and risk from radionuclides released to the environment.

This document provides detailed instructions for setting up and running GENII Example 5 (`genii_05.gid`) and GENII Example 11 (`genii_11.gid`).

1.0 Introduction

The GENII computer code was developed for the Environmental Protection Agency (EPA) at Pacific Northwest National Laboratory (PNNL) to incorporate the internal dosimetry models recommended by the International Commission on Radiological Protection (ICRP) and the radiological risk estimating procedures of Federal Guidance Report 13 into updated versions of existing environmental pathway analysis models. The resulting environmental dosimetry computer codes are compiled in the GENII Environmental Dosimetry System. The GENII system was developed to provide a state-of-the-art, technically peer-reviewed, documented set of programs for calculating radiation dose and risk from radionuclides released to the environment. Although the codes were initially developed at Hanford in 1988, they were designed with the flexibility to accommodate input parameters for a wide variety of generic sites.

The GENII Version 2 code has been documented in the following publications:

Napier BA. 2012. GENII Version 2 Users' Guide. PNNL-14583, Rev. 4, Pacific Northwest National Laboratory, Richland, Washington.

Napier BA, DL Strenge, JV Ramsdell, Jr, PW Eslinger, C Fosmier. 2012. GENII Version 2 Software Design Document. PNNL-14584, Rev. 4, Pacific Northwest National Laboratory, Richland, Washington.

Snyder SF, CI Arimescu, BA Napier, TR Hay. 2013. Recommended Parameter Values for GENII Modeling of Radionuclides in Routine Air and Water Releases. PNNL-21950, Pacific Northwest National Laboratory, Richland, Washington.

This document provides instructions for setting up a model in Section 2 and detailed step-by-step instructions for setting up Example 5 in Section 3.

2.0 GENII Setup

2.1 Starting and Customizing

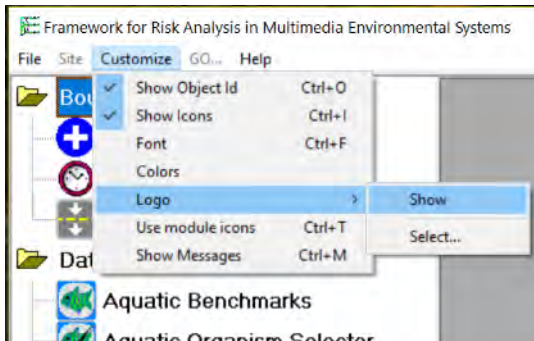

Start FRAMES system. Double click on the FRAMES icon on the desk top.

The GENII Program opens as shown below.

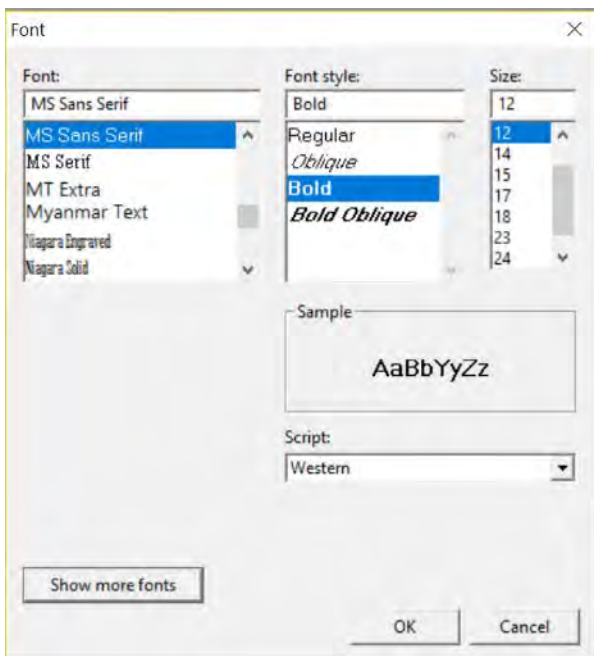

Customize the program computer screen display. The first two items Show Object Id and Show Icons are usually checked.

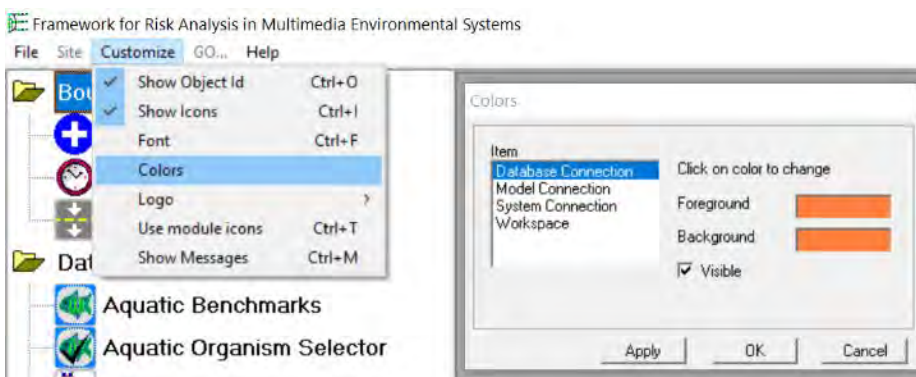

If Show Icons is not checked the icons to the left of each heading are removed.

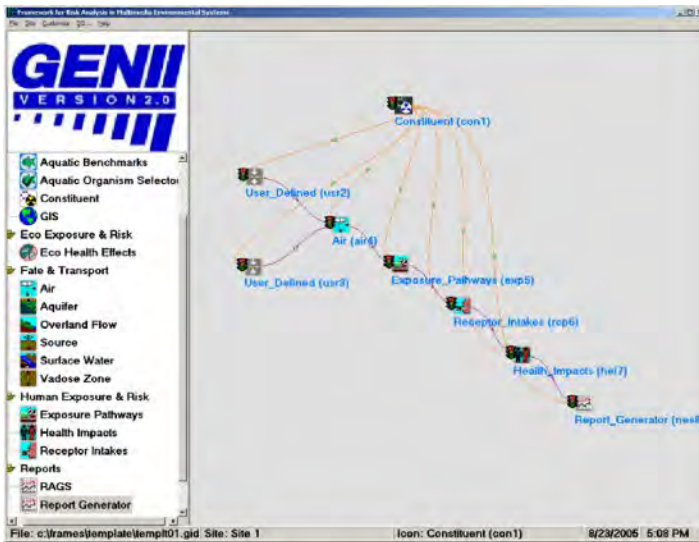

The Font selected is MS Sans Serif Bold 12 point.

Colors provides four options: Database Connection, Model Connection, System Connection, Workspace.

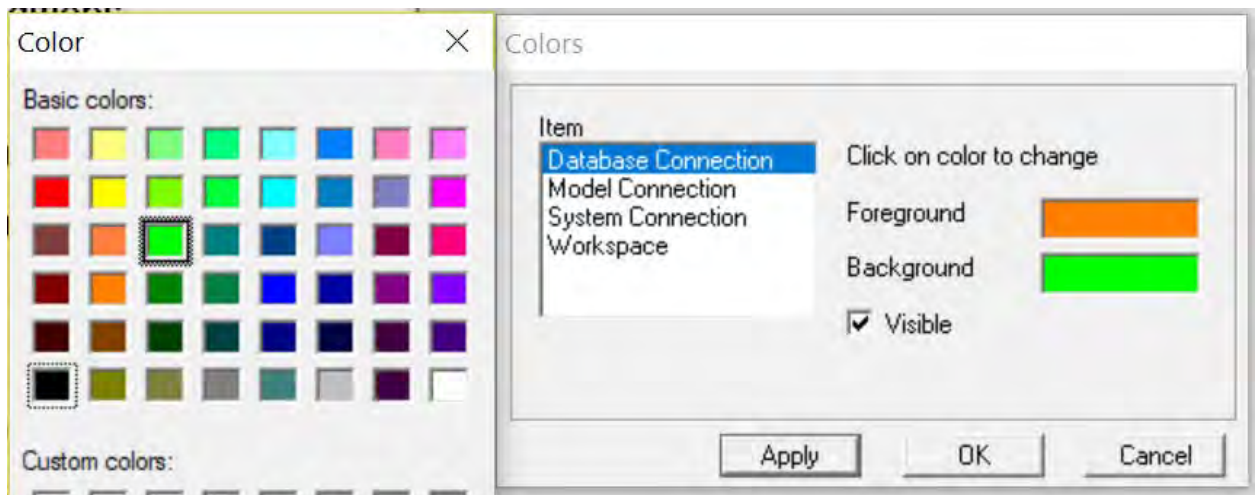

To match the Color Selections shown in Getting Started with GENII Version 2 Figure on page 4 shown below select colors as shown below.

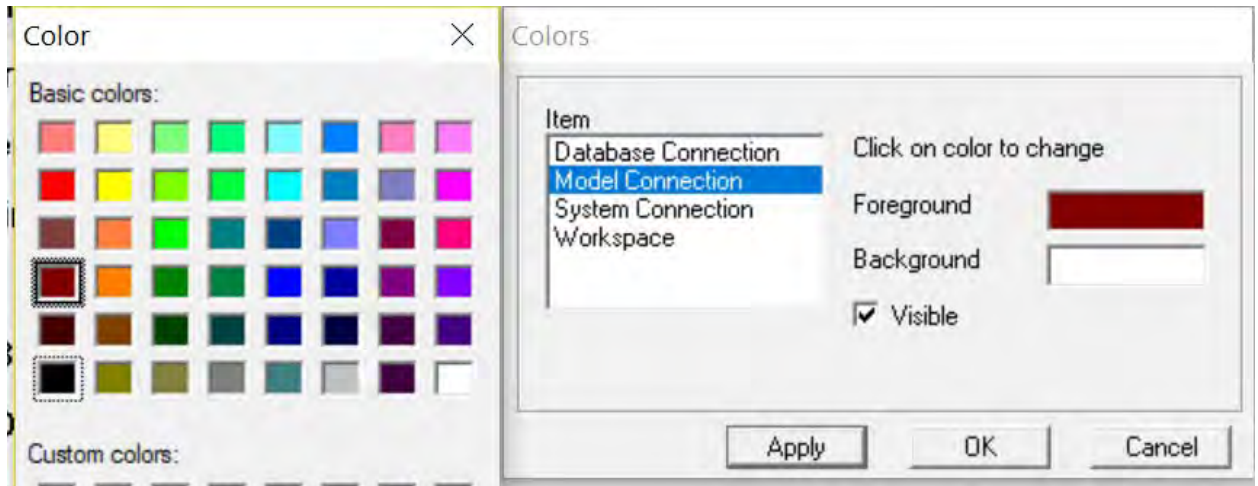

After selecting the color, select Apply to transfer the color to the display. Then click OK to close the item.

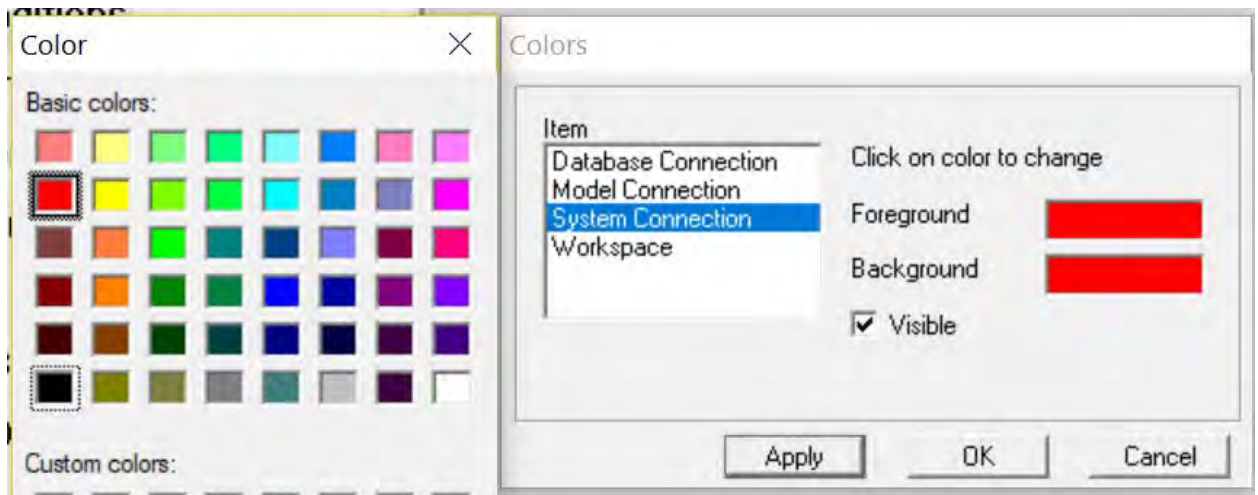

Database Connection. Select Apply to select the color and OK to transfer the color to the screen. The Foreground color is orange in the third row, second column. The Background color is green in the third row, third column. Checking Visible shows the connection lines and arrows.

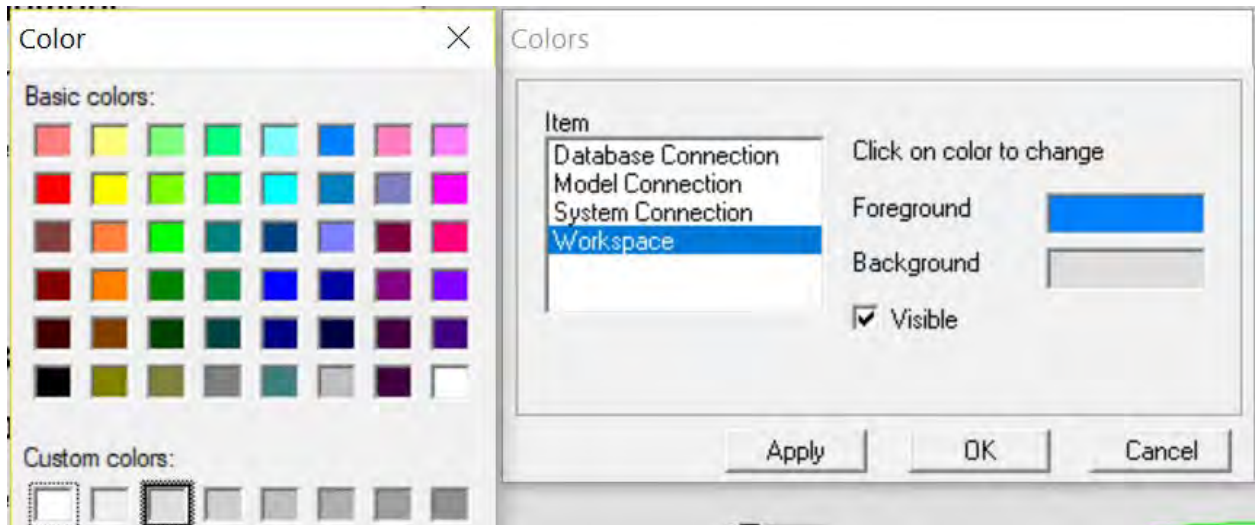

Model Connection. The Foreground color is brown in the fourth row first column. The Background color is white in the sixth row eighth column. Checking Visible shows the brown model connection lines and arrows.

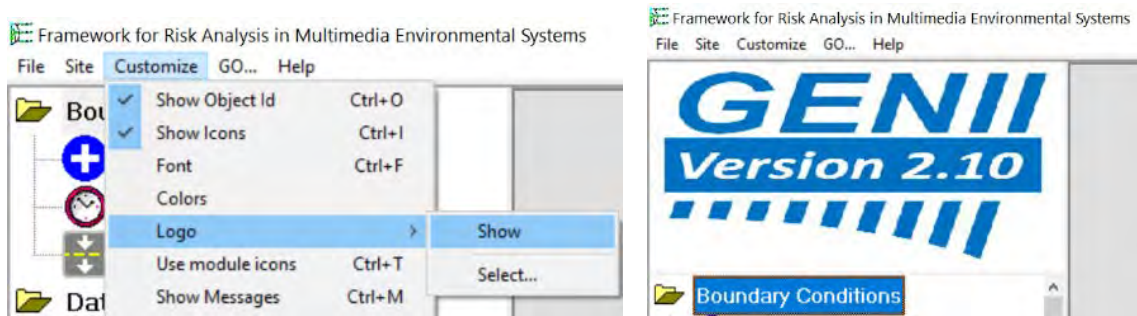

System Connection. The Foreground and Background colors are both red in the second column first row.

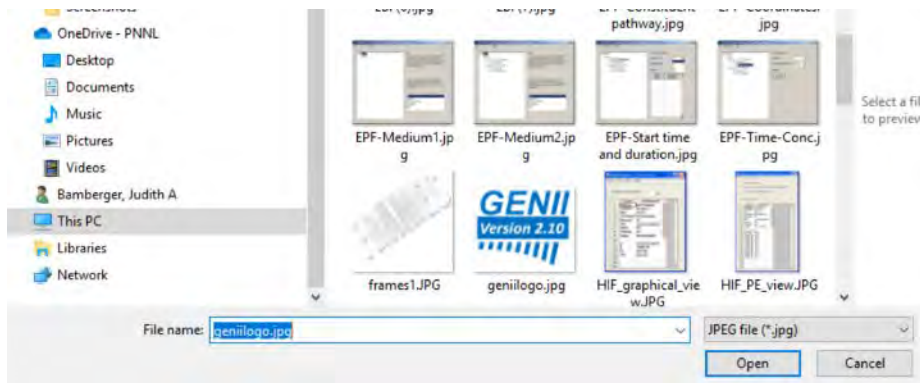

Workspace. The Foreground color is blue in the first row, sixth column and is the text color. The Background is Custom Colors light gray in the third column. Checking Visible shows the text labels on the display. To remove the labels, uncheck the visible box.

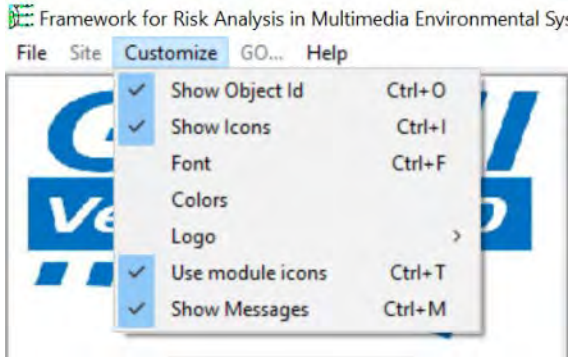

Logo. Select Show to show the GENII Version 2.10 logo at the top of the display.

Logo. Choose Select to add a custom logo at the top of the display. Select opens a window. Select geniiologo.jpg for the GENII 2.10 logo.

Other topics include Use module icons and Show Messages. If Show Messages is selected, then a message window opens at the bottom of the screen.

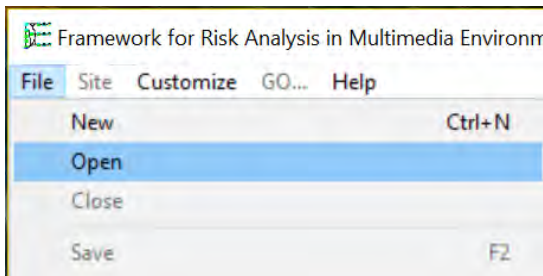

2.2 Setting Up a Calculation using Templates

Start FRAMES system. Double click on the FRAMES icon on the desk top.

Left click on File\Open command sequence at the upper left corner of the FRAMES screen.

The selection list of templates opens that are located in the FRAMES>Templates folder.

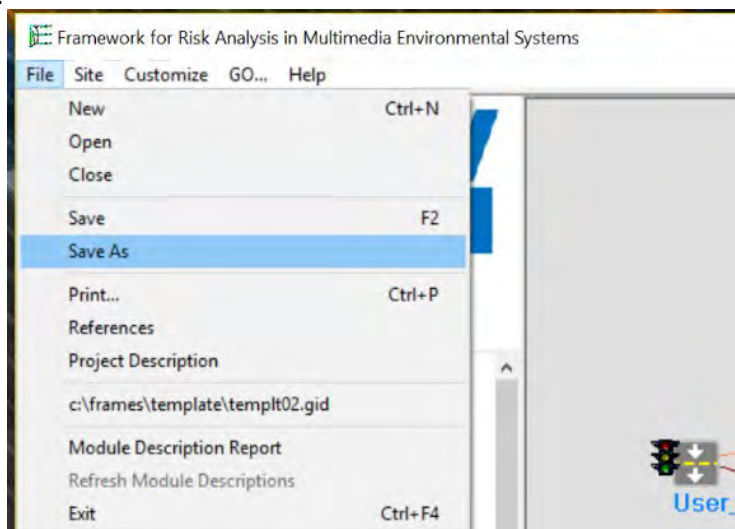

Select a template (tempt02.gid in this example) by highlighting it and selecting Open. The selected template will appear in the FRAMES screen. All module connections and model

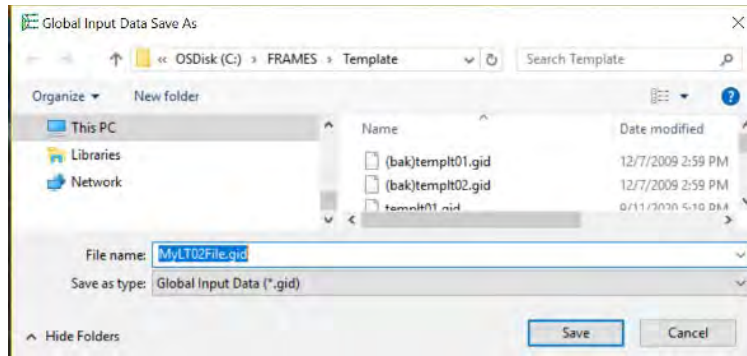

selections are now made. This is indicated on the screen as a series of icons, connected with colored lines as shown below.

This is the GENII 2.10 templ02.gid.

Save the file using the FRAMES File Save As Command using a file name and directory of your choice.

3.0 Examples

Step by step instructions follow for setting up Example 5 (genii_05.gid) followed by a brief summary of Example 11 (genii_11.gid).

Examples are located in the GENII directory (c:\FRAMES\Examples)

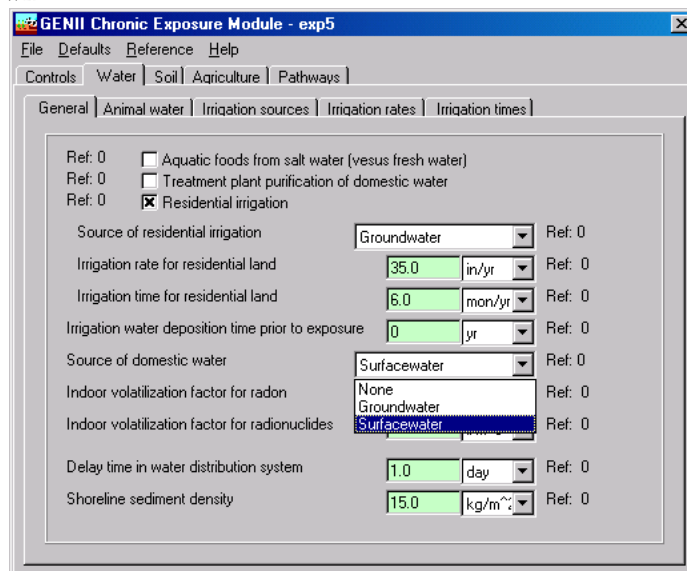

3.1 Example 5

Example 5 is concisely summarized below.

Example	Description	Complexity
GENII_05.GID	Three sources (air, surface water, and groundwater) with user-defined nuclide concentrations cause exposures through animal products, crops, and aquatic food ingestion, as well as inhalation and external exposure. Irrigation is included.	Complex

The following summary is provided in GENII Version 2 Users' Guide (Napier 2012).

“GENII_05: This example scenario is derived from the template TmpKnown, for which air, surface water, and groundwater concentrations of radioactive contaminants are known. For this example, the radionuclide ¹³¹I is selected, and the decay progeny ^{131m}Xe is automatically added. The three known environmental media, air (via the ATO Air Module), surface water (via the WCF Surface Water-dissolved module), and groundwater (via the WCF Groundwater-dissolved module) are selected. For the air, the iodine is described as being in particulate form using the Flux Types button and known air concentrations, and total annual deposition rates are entered. For the two water concentration modules, a short time history of water contamination is entered. The GENII Chronic Exposure module is used to estimate concentrations of ¹³¹I in food crops from depositions from air and water. Sources of water for home consumption, irrigation, and farm animal use must be selected from the Water/General and Water/Irrigation Sources tabs, as shown:

One age group (defined to be 0-70 years in this example) is selected in the GENII Receptor Intakes module and consumption rates are input. The GENII Health Impacts module is

selected, with the ICRP-26/30 option. Radiation dose is selected. The dose may be viewed by using the right-click and View/Print model output selection. Because three source media have been used, the output summaries are provided for all.”

To open Example 5 using the stored example either

- 1) Double click on the Icon Launch Frames or

- 2) Left click on the windows icon in the lower left of the screen

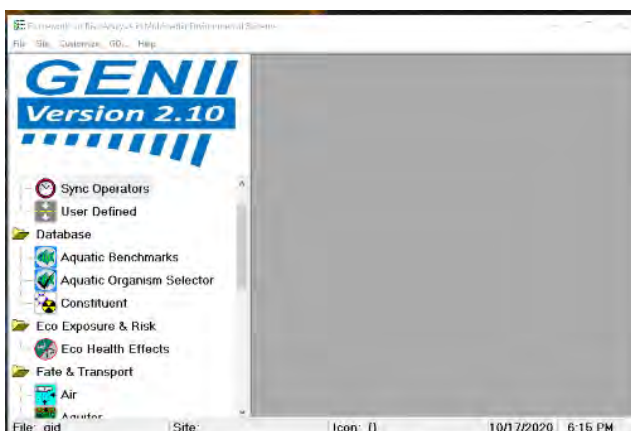

and select the Launch FRAMES icon as shown in the drop-down menu under FRAMES.

Or

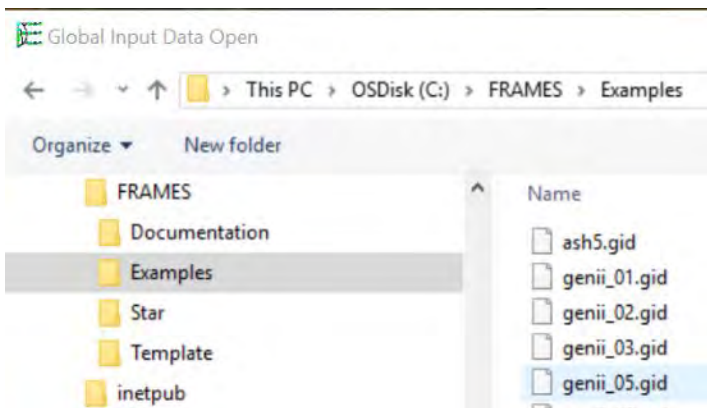

- 3) Run \\FRAMEX\FUI.exe (FUI stands for Frames User interface). The FRAMES Program opens.

To open the completed Example 5, select File > Open,

then select FRAMES\Examples\genii_05.gid to open the completed example 5.

The completed Example 5 is shown below

The example consists of seven icons arranged in a single “conceptual model”.

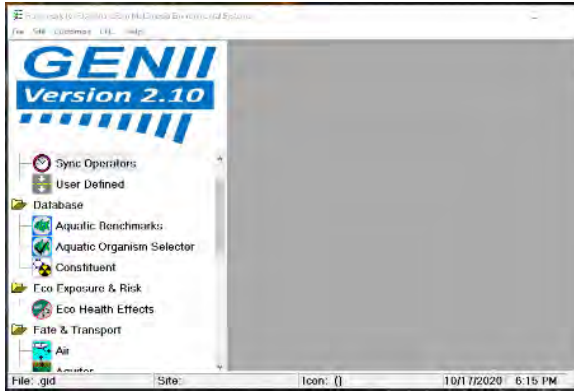

- Database
 - Constituent (con1)
- Boundary Conditions
 - User_Defined (usr2)
 - User_Defined (usr3)
 - User_Defined (usr4)
- Human Exposure & Risk
 - Exposure_Pathways (exp5)
 - Receptor_Intakes (rcp6)
- Human Exposure & Risk (hei7)

Each of the icons has a name in parenthesis followed by a number; for example (con1). The example is built starting with the icon numbered 1, and each icon is added in succession ending with icon 7. The example will be constructed in the following steps:

- 1) Open the program, open a new case, and name the site.
- 2) Add the icons to the display in a logical order and displayed so that the icons can be connected while being able to see the connections and read the icon names.
- 3) Add the connections between the icons. Each line has an arrow showing the direction of the connection.
- 4) Select the models for each step (Add General Information to the model).
- 5) Add User Input to the models.
- 6) Run the model.

3.1.1 Getting Started with Example 5

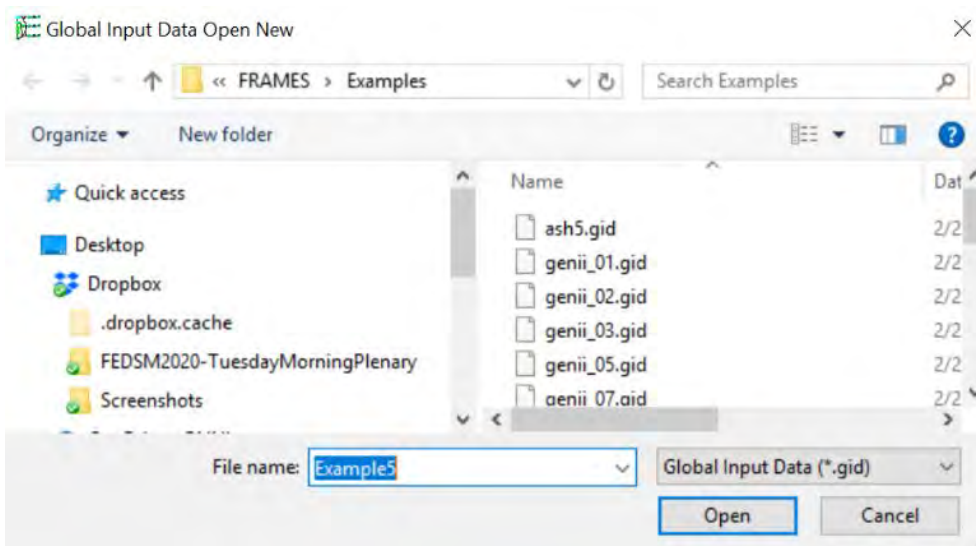

From the open FRAMES program screen open a new file.

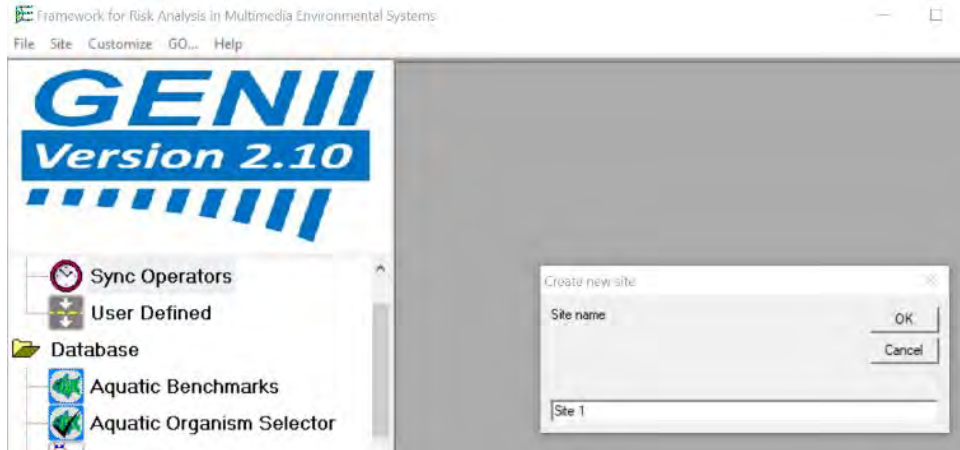

Select File > New.

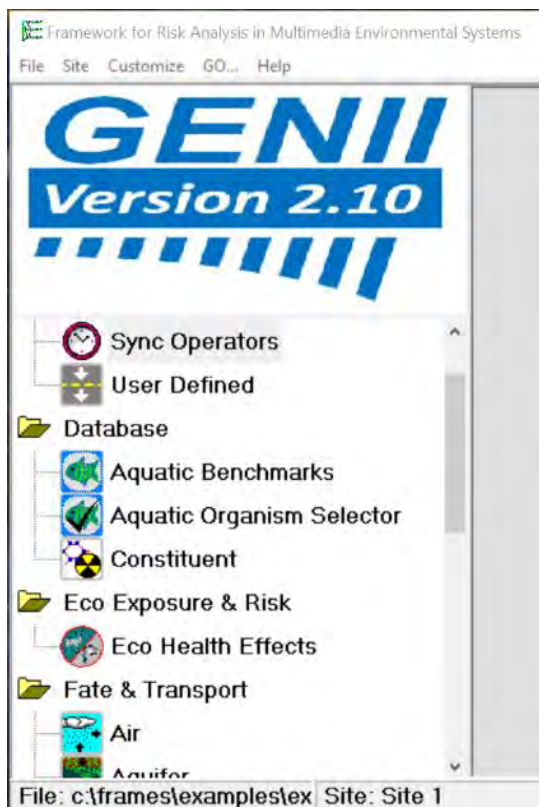

The following window opens, and a File name is requested. Name this file Example5. Note the file name must contain eight characters or less. Note, this file is now stored in the Frames > Examples sub folder. You may save the file in a folder of your choice.

The program requests a site name. Multiple conceptual models may be saved in the same *.gid file by using Sites; only one conceptual model will be used in this example. The suggested Site name is Site 1. You may name the site 1 as done here or select a name of your choice. After you have named the site select OK.

Note that at the bottom of the screen in the second box from the left the site is named Site: Site 1.

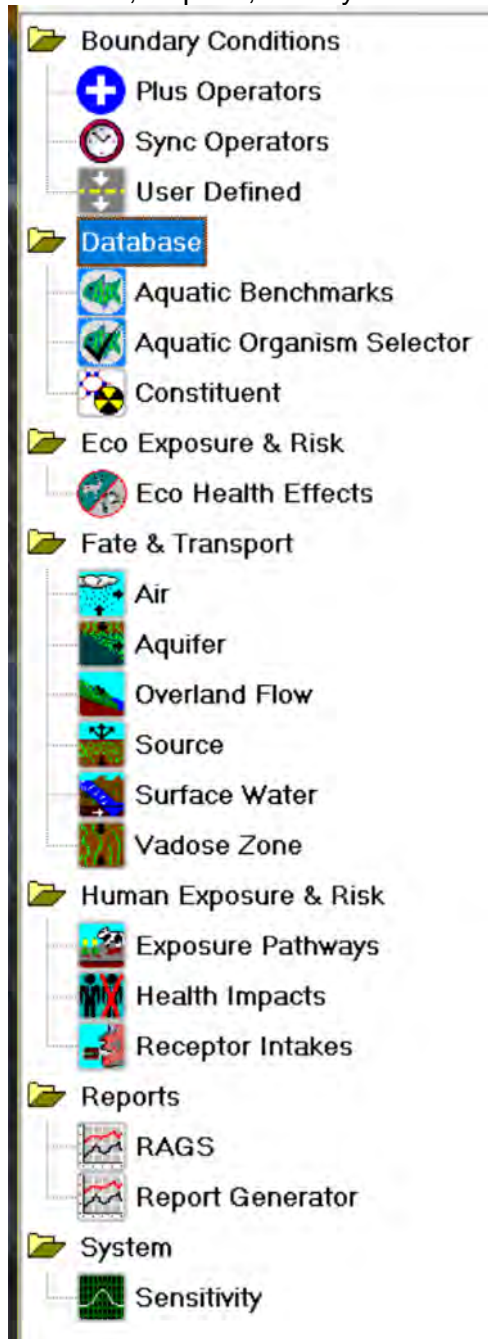

Also note at the bottom of the screen the file location File: is listed in the left box. The Site: name is listed in the second box. The Icon: is listed in the third box. The date is listed in the fourth box. The time is listed in the fifth box.

3.1.2 Add Icons to Example 5

This procedure will add the seven icons (model types) sequentially to the model.

Start building the model using the tool icons shown on the left of the display. These items are grouped as Boundary Conditions, Database, Eco Exposure & Risk, Fate & Transport, Human Exposure & Risk, Reports, and System.

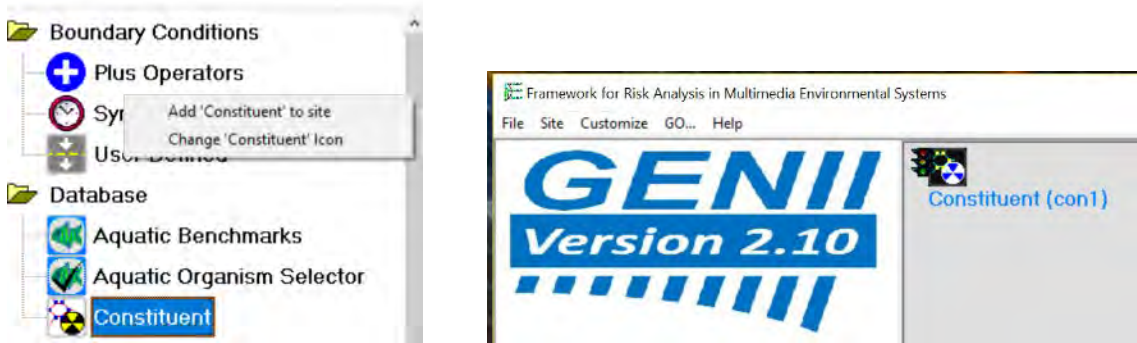

3.1.2.1 Icon 1 Constituent (con1) - Database

Icon 1: From the list of modules on the left of the window, add a Constituent Database to the center top of the display. Three data bases are provided: Aquatic Benchmarks, Aquatic Organism Selector and Constituent. Select Constituent for this example.

Right click on Constituent: There are two choices: Add 'Constituent' to site or Change 'Constituent' icon. *Note, double clicking on the icon will also add it to the site.*

Select Add 'Constituent' to site. The icon shows up in the upper left corner of the screen. It is labeled Constituent (con1); the one signifies it is the first icon added to the model.

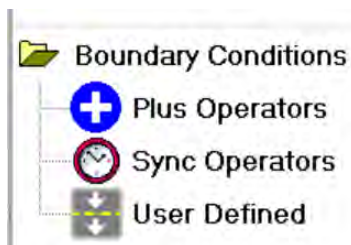

The icon name shows up in the 3rd box at the bottom of the display.

Move the icon slightly to the right of the screen near the top by clicking on the icon and dragging it with the mouse. By moving the icon, a space is available for the next icon to populate.

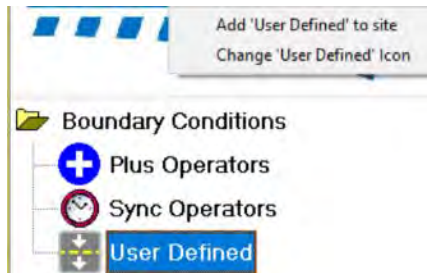

3.1.2.2 Icons 2, 3, and 4 User Defined (usr2), (usr3), and (usr4) – Boundary Conditions

Icons 2, 3, and 4: Add three Boundary Conditions to the upper left of the display, one below the other. Three Boundary Conditions are provided: Plus Operators, Sync Operators and User Defined. Select three User Defined icons for this model.

To add them to the upper left of the display: Right click on User Defined: There are two choices: Add 'User Defined' to site or Change 'User Defined' icon.

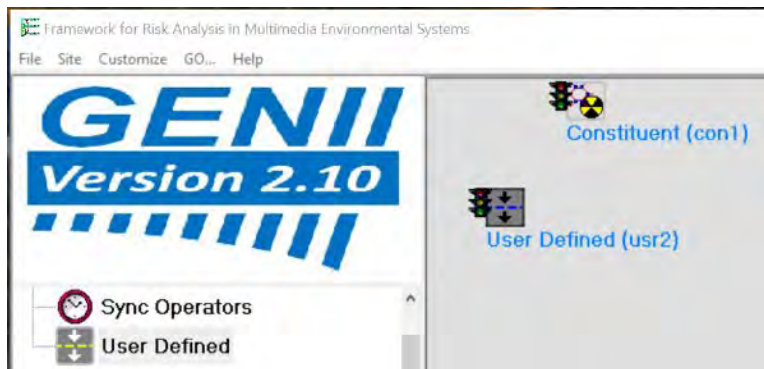

Select Add 'User Defined' to site.

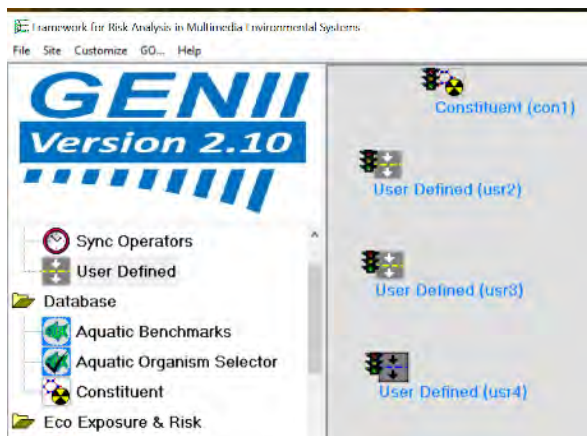

The icon shows up in the upper left corner of the screen. It is labeled User Defined (usr2); the two signifies it is the second icon added to the display.

Move the icon to the left of the screen slightly below (con1) by clicking on the icon and dragging it with the mouse.

Following the steps above add a second and a third User Defined Icons. Place them beneath the first User Defined Icon. They are labeled User Defined (usr3) and User Defined (usr4) on the display.

3.1.2.3 Icon 5 Exposure Pathways (exp5) – Human Exposure & Risk

Icon 5: Add Human Exposure & Risk to the model. Three items are provided: Exposure Pathways, Health Impacts, and Receptor Intakes. To add Exposure Pathways to the model:

Right click on Exposure Pathways. There are two choices: Add 'Exposure Pathways' to site and Change 'Exposure Pathways' Icon. Select Add 'Exposure Pathways' to site. The Exposure Pathways icon shows up in the upper left corner of the screen. It is shown in red. Note the prior icon has changed arrow colors from black to white.

It is labeled Exposure Pathways (exp5); the five signifies it is the fifth icon added to the display. Position the 'Exposure Pathways' icon below and diagonally to the right of Constituent (con1).

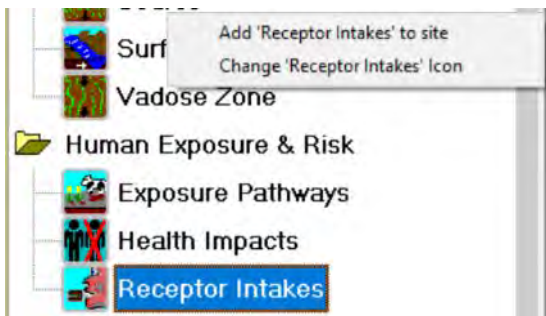

Note the color of the icon. The colors of the last to be input icon are reversed from that shown in the icon list. When another icon is added, the color of the prior icon reverts to that shown in the icon list.

3.1.2.4 Icon 6 Receptor Intakes (rcp6) – Human Exposure & Risk

Icon 6: Add another Human Exposure & Risk Icon for Receptor Intakes.

Right click on Receptor Intakes. There are two choices: Add 'Receptor Intakes' to site and Change 'Receptor Intakes' Icon. Select Add 'Receptor Intakes' to site.

The 'Receptor Intakes' icon is added in the upper left corner of the screen and is red.

Move the icon diagonally to the right and below the Exposure Pathways icon by clicking on the icon and dragging it with the mouse.

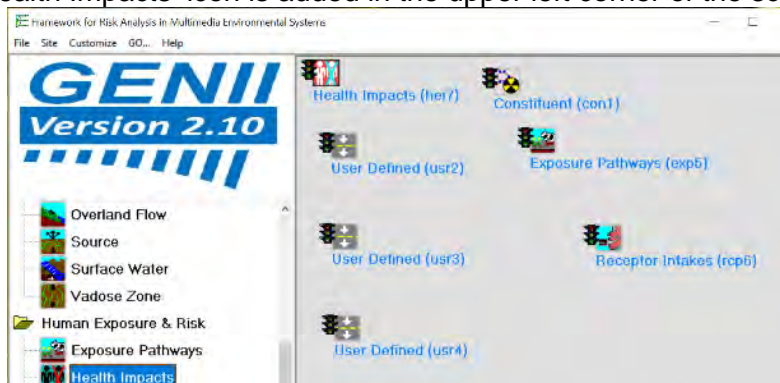

3.1.2.5 Icon 7 Health Impacts (hei7) – Human Exposure & Risk

Icon 7: Add another Human Exposure & Risk Icon for Health Impacts.

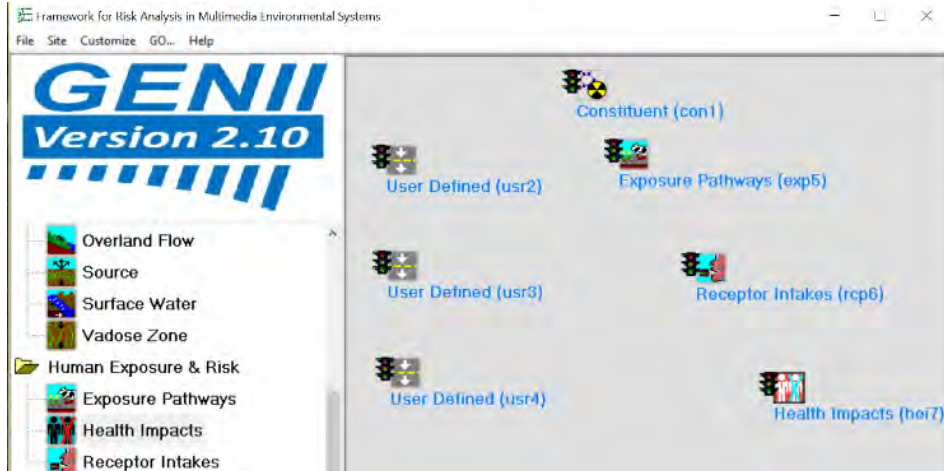

Right click on Health Impacts. There are two choices: Add 'Health Impacts' to site and Change 'Health Impacts' Icon. Select Add 'Health Impacts' to site.

The 'Health Impacts' icon is added in the upper left corner of the screen and is red.

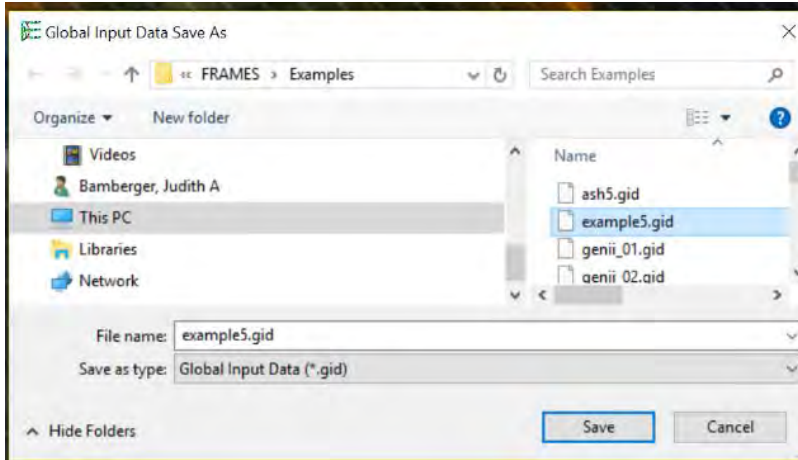

Move the icon down and diagonally to the right of the Receptor Intakes icon by clicking on the icon and dragging it with the mouse.

This step completes the addition of icons to the screen. The model consists of 7 icons arranged as shown below.

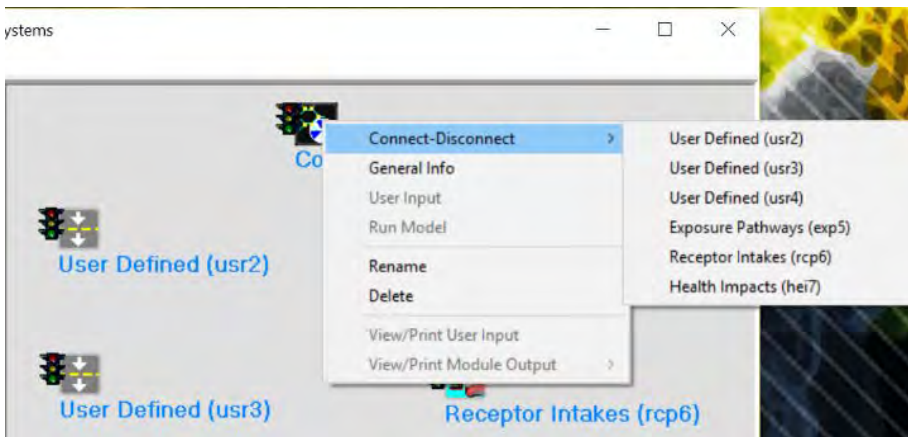

Save the file as: Example5.gid in the Frames > Examples directory or in another directory of your choice.

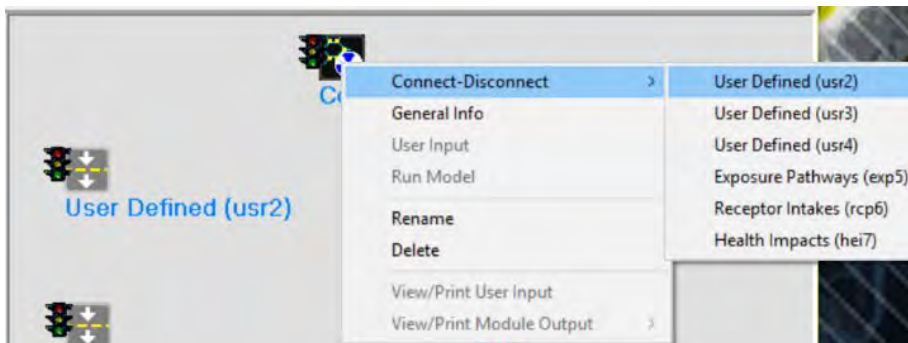

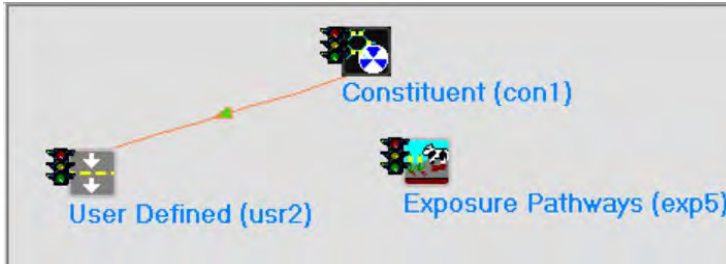

3.1.3 Add Connections to Example 5

Icon 1: To add connections between the icons start with Constituent (con1) icon. Right click on the icon and select Connect-Disconnect. A window opens showing all of the icons to be connected. Note that the icon names are numbered sequentially in the order they were added to the model.

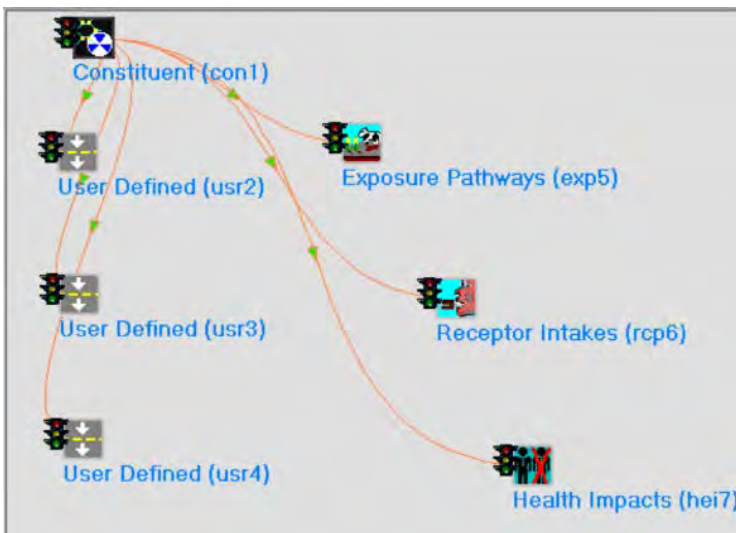

Select User Defined (usr2) as the first connection.

Notice that the line connecting the two icons is shown in orange and the green arrow in the middle of the line shows the direction of the connection from (con1) to (usr2).

The constituent data base must be connected to each icon. Sequentially right click on Constituent (con1) and connect to each icon. The result shows Constituent (con1) connections to each icon. Notice that Constituent (con1) has been moved slightly to the left to show the connections more clearly with less overlap.

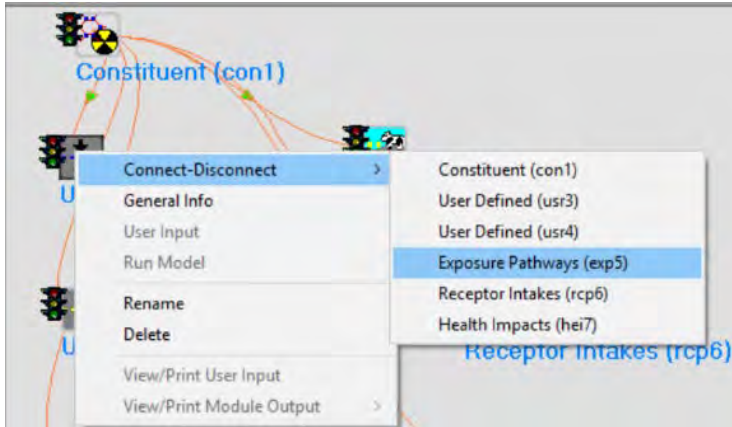

The next step is to connect the user defined icons to the Exposure Pathways (exp5).

Icon2: Right click on User Defined (usr2) and connect to Exposure Pathways (exp5).

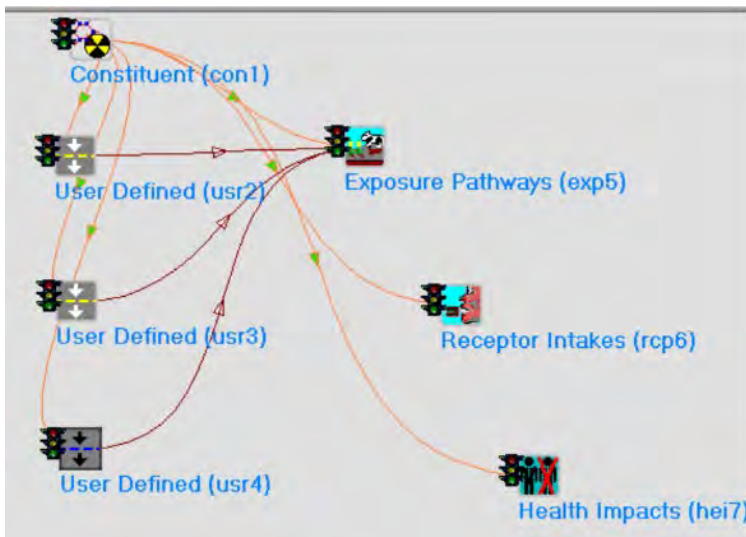

Icon3: Right click on User Defined (usr3) and connect to Exposure Pathways (exp5).

Icon 4: Right click on User Defined (usr4) and connect to Exposure Pathways (exp5).

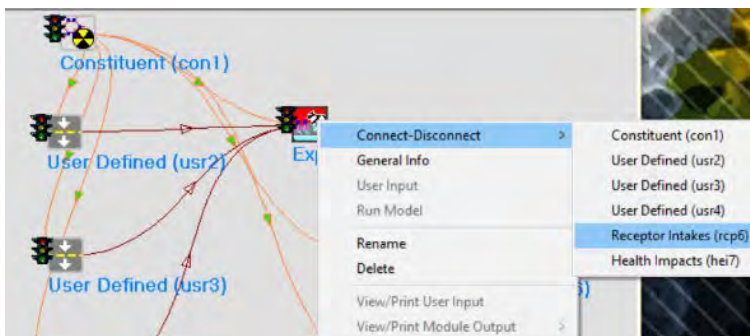

Note that it is also possible to connect icons by placing the cursor on the starting icon, holding down the shift key and left mouse button simultaneously, and dragging from the starting icon to the icon to be connected to it. The connecting lines may be disconnected following the same procedure(s).

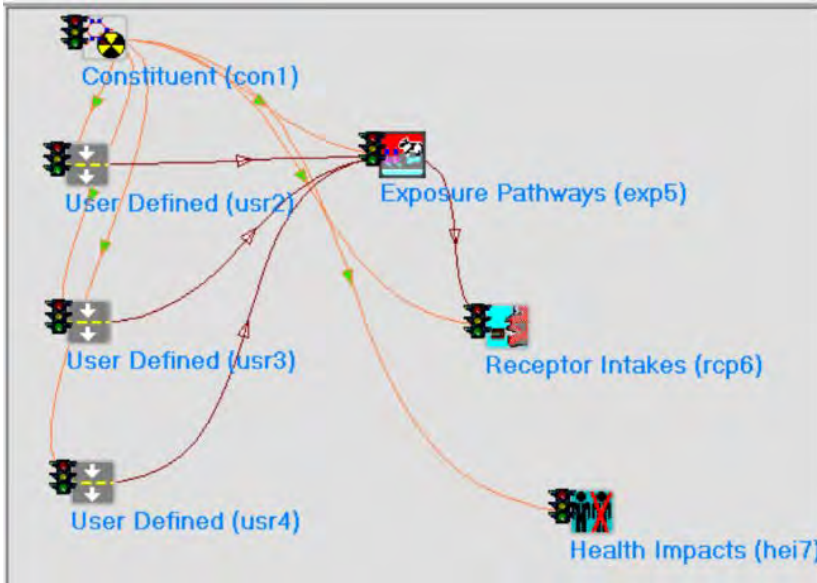

The connections are shown as a brown arrow from each User Defined to Exposure Pathways (exp5).

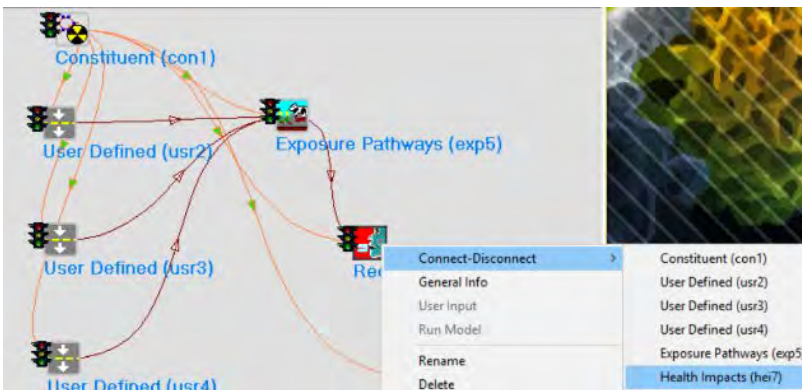

Icon 5: The next step is to connect Exposure Pathways (exp5) to Receptor Intakes (rcp6) by right clicking on Exposure Pathways (exp5) and selecting Receptor Intakes (rcp6).

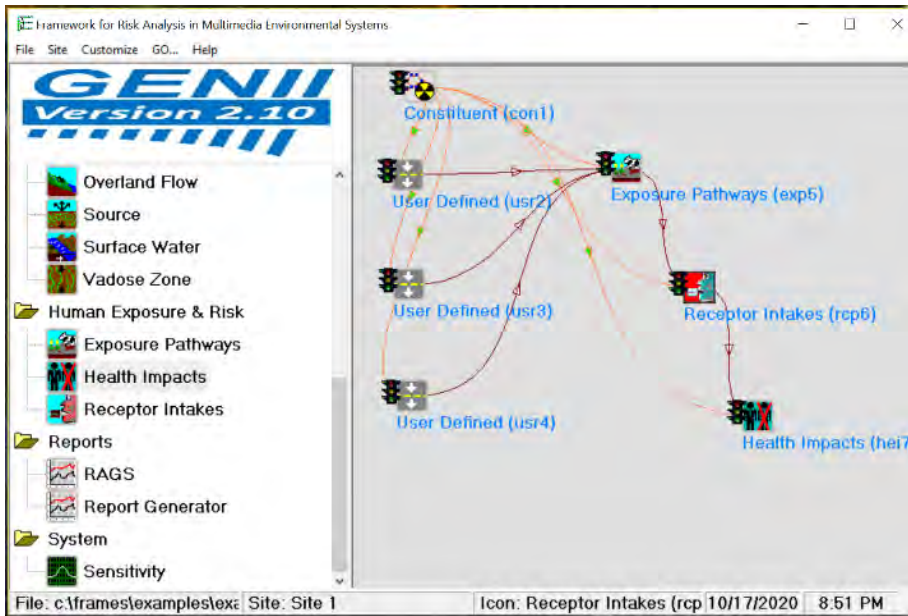

The connection is shown as a brown arrow from Exposure Pathways (exp5) to Receptor Intakes (rcp6).

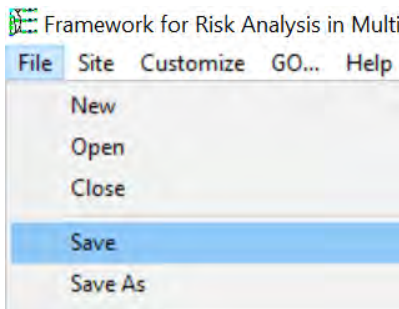

Icon 6: The next step is to connect Receptor Intakes (rcp6) to Health Impacts (hei7) by right clicking on Receptor Intakes (rcp6) and selecting Health Impacts (hei7).

The connection is shown as a brown arrow from Receptor Intakes (rcp6) to Health Impacts (hei7). The resulting wholly connected model is shown below.

Save the model by selecting File along the top ribbon and then selecting Save.

This completes the explanation of how to set up and run genii_05.gid, called Example5.gid in this document.

3.2 Example 11

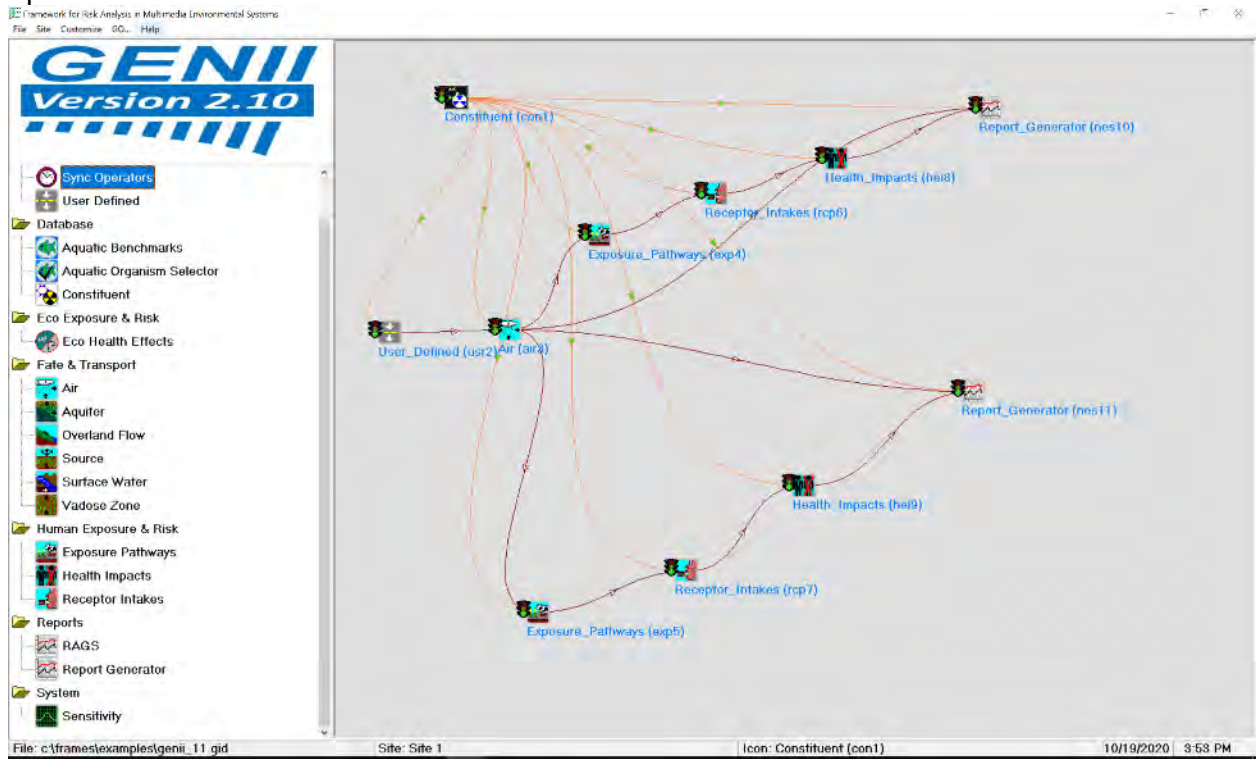

Example 11 is concisely summarized below. The following summary is provided in GENII Version 2 Users' Guide (Napier 2012).

“GENII_11: This complex example is a typical use of the FRAMES/GENII system to evaluate chronic releases of radionuclides from a facility into the atmosphere. In this example, the upper branch (derived from the template Templt01) represents the dose estimation to a large-area grid with a distributed population. The lower branch is a detailed evaluation of the dose to an individual at the maximally-exposed location. In this example, the noble gas ⁴¹Ar, ¹²⁹I treated as a particulate source, and HTO vapor are modeled. The AFF Air Module is used to input the release rates of the radionuclides and the physical description of the releasing source facility (a low building with a 60-meter stack). The GENII Chronic Plume model is used to estimate the atmospheric dispersion. The upper branch of the calculation then accepts the entire grid of atmospheric dispersion results and calculates environmental concentrations with the GENII Chronic Exposure Module. These are used in the GENII Receptor Intakes module in the upper branch to generate a grid of intakes for average individuals by location and pathway, which are then used in the GENII Health Impacts module to estimate doses using the ICRP-26/30 dose conversion factors. A population file is input to the GENII Report Generator to develop a table of population doses. On the lower branch, a single location is selected for more analysis. The selection of the location is determined when the icon is defined, using the right-click/General Info command. This opens the selection menu. The location is defined using the Northing and Easting inputs: an input of (0,0) tells the system to run the default full grid, but any other input defines a specific location with respect to the center of the atmospheric dispersion grid. This is shown as:

The lower branch of the calculation uses the single point atmospheric dispersion results and calculates environmental concentrations with the GENII Chronic Exposure Module. These are used in the GENII Receptor Intakes module in the lower branch to generate intakes for a maximally-exposed individual by pathway, which are then used in the GENII Health Impacts module to estimate doses using the ICRP-60/72 dose conversion factors. The GENII Report Generator summarizes the individual results.”

The completed model is shown below.

This model features calculations at a specific location identified by the Easting and Northing coordinate identified in Exposure Pathways under General Information.

3.2.1 Getting Started with Example 11

Detailed step-by-step instructions for starting GENII are provided for Example 5 in 3.1.1.

Adding icons is explained in detail for Example 5 in 3.1.2. Follow these instructions to add icons based on the details for the 11 icons for Example 11.
